

Sohail Shaik

✉ sohailshaik1712@gmail.com ☎ 6304778548 📍 Hyderabad, India 🌐 shaiksohail1107

Profile

Software Development Engineer skilled in Python, Java, and machine learning. Experienced in building scalable web applications, REST APIs, and deep learning models. Strong problem solver with a collaborative mindset and a focus on delivering efficient, maintainable code.

Skills

Soft Skills: Problem Solving, Team Collaboration, Event Management

Programming Languages: Python, Java, JS SQL

Databases: SQLite, MySQL

Cloud & DevOps: AWS, Git, CI/CD

Web & Frameworks: Django, Streamlit, REST APIs

Machine Learning: Deep Learning, CNN, EfficientNet, Scikit-learn, TensorFlow, NLP

Concepts: Data Structures, Algorithms, OOP, Microservices, Unit Testing, Agile

Professional Experience

06/2024 – present
Hyderabad, India

System Engineer | MDM Analyst

Tata Consultancy Services

- Designed and optimized scalable data workflows and pipelines using Stibo Systems MDM tools, improving data quality and processing efficiency.
- Developed and maintained custom business logic and JavaScript modules to automate and enhance system functionality.
- Collaborated with cross-functional engineering and product teams to deliver robust, maintainable master data management solutions aligned with business requirements.

Education

2020 – 2024
Hyderabad, India

Bachelor of Technology(B.tech), Electronics and communication

VNR Vignanajyothi Institute of Engineering & Technology
CGPA 8.42

2018 – 2020
Hyderabad, India

Senior Secondary (XII), Science

Sri Chaitanya Educational Institutions
GPA 9.63

2017 – 2018
Gudivada, India

High School(X), Science

Vishwabharati English Medium High School
GPA 9.8

Certificates

Machine Learning [↗](#) — Coursera | Stanford Online

Machine Learning, Python [↗](#) — Cognitive class.ai | IBM

SQL for Data Science [↗](#) — Coursera | IBM

Data Analysis with Python [↗](#) — Coursera | IBM

Projects

Fraud Detection Payment Gateway

- Designed and implemented a secure **payment gateway** using Python and Flask, integrating real-time fraud detection algorithms and two-factor authentication.
- Utilized **machine learning** models for anomaly detection, and RESTful APIs for seamless transaction processing.
- Achieved 97% accuracy in flagging suspicious transactions using a custom supervised model.
- Deployed to AWS using **CI/CD pipelines** and Docker for scalability.
- Technologies: Python, Flask, AWS, Docker, Scikit-learn, REST APIs.

Smart Railway/Bus Time Prediction Platform

- Created a web-based application for **predicting train and bus arrival times**, combining public transit APIs with custom predictive algorithms.
- Implemented RESTful endpoints for client access, and dashboard analytics for route efficiency.
- Used historical and real-time data with regression/ML models to estimate arrivals, improving commuter planning.
- Deployed the platform on AWS to handle concurrent user loads.
- Technologies: Python, Django, AWS, Pandas, Public Transport APIs.

Social Media Sentiment Analyzer & Dashboard

- Engineered a full-stack application to **scrape, analyze, and visualize sentiment trends** from Twitter and Reddit.
- Performed large-scale web scraping, NLP-based sentiment analysis, and real-time dashboard updates.
- Provided insights on social buzz around trending topics, including charts and time-series visualizations.
- Achieved real-time update intervals under 5 seconds for high-traffic events.
- Technologies: Python, Django, BeautifulSoup, NLTK, D3.js.

Organizations

2022 – 2024
Hyderabad, India

Entrepreneurship Development Cell | VNR VJIET

Executive for event organization.

- Successfully organized three innovation and entrepreneurship events leveraging strong organizational skills.
